Disaster Management

About Course

Disaster Management aims to save lives, protect property, and support affected populations during and after disasters. It involves preparedness, response, recovery, mitigation, collaboration, and proactive planning.

Overview

- **Preparedness:** Planning, risk assessment, early warning systems, training, and public education.
- **Response:** Immediate actions during a disaster, such as activating emergency systems, search and rescue, medical assistance, and public safety.
- **Recovery:** Assessing damage, providing temporary shelter, restoring infrastructure, assisting economic recovery, and providing psychosocial support.
- **Mitigation:** Measures to reduce future risks, such as land-use planning, resilient infrastructure, early warning systems, building codes, and community resilience.
- **Collaboration:** Involvement of government agencies, emergency services, NGOs, community groups, and individuals.
- **International Support:** Role of global organizations like the United Nations in supporting disaster management efforts.
- **Coordination and Communication:** Essential for effective disaster management.
- **Proactive Planning:** Emphasizing preparedness, capacity building, and data-driven approaches.
